

Post-concussive Symptoms and Executive Functioning Study

Have you had a concussion and now experience cognitive and/or psychological symptoms?

Purpose: To examine the association of self-reported executive functioning with psychological symptoms and test-based executive functioning.

Eligible participants must:

- Be over 18
- Have had a concussion (mild traumatic brain injury) more than 3 months ago
- Have cognitive or psychological symptoms

Procedures:

- Cognitive and psychological testing
- Passive data collection on your smartphone (optional)

Study Visits: The study will last 8 weeks and include 3 visits total.

- Baseline (3 hours)
- Follow-up (4 weeks after baseline, 3 hours)
- Final (4 weeks after follow-up, 3 hours)

Compensation:

- You may be compensated for your participation only if you are a non-federal employee/non-active duty

For more information, please contact us at 301-841-6094 or PSEFstudy@gmail.com to see if you may qualify.
